HP3000 MPE/iX Triple Store

Tired of tape backups? Backup job hangs? Tapes that are off site when you critically need them? Prices of disc storage now allow for multiple disk backup copies. Backing up to one tape copy is labor intensive, risky and unreliable. Triple Store as the name suggests is a process that creates three back up copies. The primary copy is to local user volume MPE/iX storage. This allows for the fastest backup and recovery procedures. A secondary local copy is sent via SFTP to a network connected Linux Appliance. The third copy is then encrypted and placed on removable solid state disk (SSD) to send to secure off site storage.

Triple Store Hardware

"Smart Enclosure" external drive that attaches via SCSI and is configured as a stand alone user volume
100BT half high dedicated network card
Triple Store Appliance with 1TB storage

Triple Store Applications

Triple Store online to disk backup stores to local user volume. Depending on compression, 72GB local user volume will hold several backup copies. FTP/SFTP transfer Job on HP that runs after online backup. Transfers compressed backup file to Linux Appliance via secure transfer or dedicated 100BT interface.

Linux Appliance application encrypts current store file and adds to 1TB library of store images.

Linux Appliance application copies encrypted store file to external SSD disc for off site storage. Optionally Linux Appliance can copy encrypted store file to customer SAN to integrate with existing off site back up procedures.

Optional Disaster Recovery Services

Beechglen offers 'Hot Site' Disaster Recovery. Beechglen provides a compatible HP3000 system. The encrypted store file is transferred to Beechglen via SFTP and applied to Customer's DR system.

Triple Store Typical Monthly Pricing

Hardware: Disk, 100BT, Linux Appliance	\$ 50.00
Triple Store Support and Monitoring	\$ 175.00
Beechglen Cloud Storage	\$ 40.00 per 250Gb
Optional Disaster Recovery	\$ 450.00
